                                                                                                                                                                                    The invention provides an antibody (Ab) comprising donor CDRs (complementarity determining regions) derived from a non-human antigenspecific donor antibody, and an acceptor framework from a non-human primate. The Abs are prepared by grafting CDRs from a non-human matigenspecific donor antibody onto homologous Old World ape or monkey acceptor frameworks. The Abs have reduced immunogenicity and are better tolerated in humans (because of the close similarity between the human and primate proteins), but retain the full antigen-binding affinity of the donor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          40

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        21 LysCysAspileGlnMetThrGlnSerProSerThrLeuSerAlaSerValGlyAspArg 40
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    The invention is based on the discovery of new human immune response proteins (HIRP), the polynucleotides encoding them, and the use of these compositions for the diagnosis, treatment or the use of these compositions for the diagnosis, treatment or prevention of immunological and cell proliferative disorders.

The present sequence is that of human immune response protein 1 proportions of the present sequence is that of human immune response protein 1 polynucleotide assembled e.g. from a lung adenocarcinoma CDNA ibrary clone. The amino acid sequence shows homology from tesidue W123 to C241, to an HIV-1 antigen binding protein, and of urther homologies suggest that it may be an immunologilal from the diagnosis, curther homologies suggest that it may be an immunologilal polynucleotides and polypeptides are useful for the diagnosis, cancers, arretiosclerosis, actinic keratosis, bursitis, mixed connective tissue disease, actinic keratosis, poriasis, cancers, arretiosclerosis, actinic keratosis, poriasis, connective tissue disease (MCTD), myelofibrosis, poriasis, leukaemia, hepatitis, cirrhosis and atherosclerosis), and immunological disorders e.g. AIDS, Addison's disease, acutofmune diseases, contact dermatitis, diabetes mellitus, cholecystitis, multiple sclerosis, irritable bowel syndrome, osteoporosis, multiple sclerosis, irritable bowel syndrome, osteoporosis, rheumacoid arthritis, ulcerative colitis, trauma, and viral, antaonist connective also used to screen for agonist and antaonist connective colitis, incared and antaonist and antaonist connective colitis, incared and antaonist and antaonist and antaonist antaonist connective colitis, trauma, and viral, antaonist connective colitis, resented and disease.
                                                                                                                                                                                                                                                                                                                                                                                                                       Novel human immune response proteins, for treating immunological disorders and cell proliferative disorders, and for assessing the effects of exogenous compounds on the expression of HIRP molecules

Its gene was isolated from a cDNA library of colon tissue. It is expressed in reproductive, gastrointestinal and cardiovascular tissue, where cancer and inflammation are common. The gene, protein, its antibodies, agonists and antagonists are suitable for diagnosing and treating many diseases, including cancer, immune system disorders (such as inflammation, AIDS, allergies, anaemia, arteriosclerosis, asthma, atherosclerosis, cholecystitis, Crohn's disease, diabetes mellitus, emphysema, Graves' disease, hepatitis, multiple sclerosis, psoriasis, rheumatoid arthritis, scleroderma, systemic lupus erythematosus and ulcerative colitis), complications of cancer, haemodialysis and extracorporeal circulation, trauma and hematopoletic cancer (such as leukaemia) and infections caused by

                                    The present sequence represents the light chain variable region of primate monoclonal antibody anti-human CD23 5E8. The invention provides primate monoclonal antibodies which specifically bind human CD23, the low affinity receptor for IGE (FCERI/CD23), and comprise either of a human gamma-1 or human gamma-3 constant region that binds not human FC gamma receptors and inhibits IGE expression. The monoclonal antibodies of the invention are claimed to be useful for inhibiting and autoimmune conditions e.g. allergic rhinitis conjunctivitis, autoimmune haemolytic anaemia, etc.

IGPAM-13. Its gene was isolated from a cDNA library of lung tumour tissue. It is expressed in reproductive, gastrointestinal and cardiovascular tissue, where cancer and inflammantion are common. The gene, protein, its antibodies, agonists and antagonists are suitable for disgnosing and treating many diseases, including cancer, immune, system disorders (such as inflammation, AIDS, allergies, anaemia, arteriosclerosis, asthma, atherosclerosis, cholecystitis, Crohn's arteriosclerosis, pasoriasis, rheumatoid arteriose, especially systemic lupus erythemacrosus and ulcerative colitis, soleroderma, systemic lupus erythemacrosus and ulcerative colitis, complications of cancer, haemodialysis and extracorporeal circulation, trauma and haemacropoletic cancer (such as leukaemia) and infections caused by bacteria, viruses, fungi or parasites.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 40

Specific antibodies are PEI-1, ZMI-1, ZMI-2, MD3-4 and L03-3, each of these being of the 1gG1 class. The present sequence is the light
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Human monoclonal antibodies specific for hepatitis B surface antigen - are used to treat or prevent infection or in diagnostic assays

This is the amino acid sequence of the light chain variable (VI) region from the human monoclonal antibody (MAb) ZM1-2. The MAb was generated by immunising humans with a hepatitis B virus (HBV) vaccine, isolating peripheral blood lymphocytes (PBL) and fusing them with a mouse/human xenogeneic cell line SPAZ-4. 5 cell lines were isolated: PE1-1, ZM1-1, ZM1-2, MD3-4 and LO3-3. The cell lines were then tested for production of an anti-hepatitis B virus surface antigen antibody by ELISA. The MADS are then purified from large scale cell culture by protein A chromatography, size separation on Sephcryl 300 gell and ion exchange chromatography on Q-Sepharose. The heavy and light chains of the MADS were isolated and their amino acid sequences determined. Primers were generated and used to amplify CDNA synthesized from RNA purified from each hybridoma cell line. The sequences of the heavy and light chains (nucleic acid and amino acid) from MADS PE1-1, ZM1-1, ZM1-2 and MD3-4 are shown in AATSSSB3-45 and AAW42984-91. The MADS can be used to treat HBV infections in immunosuppressed patients or patients with chronic active hepatitis, especially liver transplant patients.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               198
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        258
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     318
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               104
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ACTTACTATTGTCAACAGGCTAATAGTTTCCCGTACACTTTTGGCCAGGGGACCAAGCTG 378

                                                                                                                                                                                                                                                                                                                                                                                                The invention provides an antibody (Ab) comprising donor CDRs (complementarity determining regions) derived from a non-human antigenspecific donor antibody, and an acceptor framework from a non-human primate. The Abs are prepared by grafting CDRs from a non-human antigenspecific donor antibody onto homologous Old World ape or monkey acceptor specific donor antibody onto homologous Old World ape or monkey acceptor frameworks. The Abs have reduced immunogenicity and are better tolerated in humans (because of the close similarity between the human and primate proteins), but retain the full antigen-binding affinity of the donor
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Antibodies containing donor complementarity determining regions and non-human primate acceptor frameworks, having reduced immunogenicity in

The antibodies are useful in preventives and/or remedies for plateler reduction-associated blood diseases, thrombocytopenia following cancer chemotherapy or leukaemia. The antibody can act as a TPO signal transduction agonist by transducing a signal into cells by crosslinking a TPO receptor to exert TPO agonism. This is the amino acid sequence of a thrombopoietin (TPO) agonist antibody associated protein.
                                                                                                                                                                                                                       Modified antibody; thrombopoietin; TPO; agonist;

The present invention relates to modified antibodies. The antibodies contain two or more H chain V domains and two or more L chain V domains of a monoclonal antibody (MAD) which is capable of transmitting a signal across the cell membrane by cross-linking a cell surface molecule, where the antibodies can serve as signal transmission agonists. The antibodies are useful for treatment and prevention of a broad range of disorders in which signal transmission is implicated, such as cancer, inflammation, hormmonal disorders, leukaemia, malignant lymphoma, aplastic anaemia, and skeletal malformations. The present sequence was used to illustrate the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Human; ovarian antigen; ovary; ovarian; breast; cancer; tumour;

Birse CE, Rosen CA; WPI; 2002-147878/19. N-PSDB; ABQ54241. Isolated nucleic acid molecules encoding novel ovarian polypeptides, useful in the prevention, treatment and diagnosis of cancer (e.g. ovarian cancer), immune disorders, cardiovascular disorders and neurological diseases -

Claim 11; SEQ ID No 2296; 2922pp; English.

Search completed: June 3, 2003, 09:02:18 Job time : 28.263 secs

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to cDNAs encoding them (ABQ54131-ABQ56305), and also commonsases polypeptides 90% identical and polynucloctides 95% identical to the sequences of the invention. The invention additionally relates to to the sequences of the invention. The invention additionally relates to polynucleotides, antibodies against human ovarian antigens and the use convarian antigen polynucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast-related disorders. Such conditions include ovarian cancer and breast cancer, and disorders (e.g., infertility, disorders of pregnancy, anovulation, copyratic ovary syndrome, ovarian cysts, and dysmenorthoes), endocrine (e.g., infertility, disorders of pregnancy, anovulation, copyratic ovary syndrome, ovarian cysts, and dysmenorthoes), inflammatory conditions (e.g., mastitis, ophoritis and immunodeficiencies, autoimmune ophoritis, systemic lupus erythematosus), crepitatory disorders (e.g., candiovascular disorders in autoimmune ophoritis, systemic lupus erythematosus), blood-related disorders (e.g., anamina), cardiovascular disorders and urinary system disorders. Ovarian antigen polypeptides may also be used in screening for compounds which crepitate ovarian antigen sorters of compounds which turther be used as food additives or to prepare antibodies cuseful in disease diagnosis, drug targeting and phenotyping. The present cuseful in disease diagnosis, drug targeting and phenotyping. The present compounds human ovarian antigen of the invention.

Compensation, but was obtained in electronic format directly from WIPO compounds and the compounds human ovarian antigen of the invention of the printed compounds human ovarian antigen of the invention.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Patent No. 6316227
GENERAL INFORMATION:
APPLICANT: Bodmer. Mark
APPLICANT: Betting Diliest Singh
APPLICANT: Achwal, Diliest Singh
APPLICANT: Achwal, Diliest Specific Recombinant Antibodies
TITLE OF INVENTION: Interleukin-5 Specific Recombinant Antibodies
FILE REFERENCE: CARP-012
CURRENT FILING DATE: 1999-07-02
CURRENT FILING DATE: 1999-07-02
NUMBER OF SEQ ID NOS: 28
SOFTWARE: Patentin Version 3.0
SEQ ID NO 26
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               128
